

How to “Read” a Ruler

Part V. Practice Exercises 2 Identify the measurements given on the following inch rulers; record your answers, *in feet and inches*, in the answer sheet on page 43. (For example, $41\frac{17}{32}$ is, actually, $3'-05\frac{17}{32}$. Notice that the fraction stays the same when inches are converted to feet and inches.) **Do not write your answers on the pictures!** Reduce all fractions to lowest terms; use the tables on pages 47 and 48 if you have trouble doing this. Use hatch marks! (Answer Key, page 44)
